Where context bytes go: KV pool = n x compiled k exactly; the prefill working set (87 kB/token) is the non-KV term and vanishes at cap 256
XPS, n = 12,288
T2S, n = 24,576
weights (usm_host)
KV pool (cl_mem)
prefill working set (usm_device)
GPU memory after turn 1 (GiB)
